

Only ZyLAB delivers the XML advantage

Save time and money

ZyLAB is the only information management solution that archives your complete data pool in the open, non-proprietary XML format. Our XML platform guarantees uniform handling of all enterprise data, as well as the seamless transfer of responsive data as recommended by the Electronic Discovery Reference Model (EDRM) XML standard. Our clients also benefit from:

- Digital sustainability—once your data is added to an XML archive it will never have to be converted again. It will be equally accessible 100 years from now.
- XML delivers the benefits of a database without the need for one, yet the XML archive from ZyLAB integrates with your databases when appropriate.
- XML reduces costs for licensing, upgrades, storage, encryption and back-up tools, as well as the hassle of migrations.
- XML archives are scalable to growing volumes of information. Once an XML archive reaches capacity, simply add another file system in parallel.
- XML archives enhance search and retrieval across all enterprise information.

ZyLAB is the only product of its kind to be based on XML storage archives.

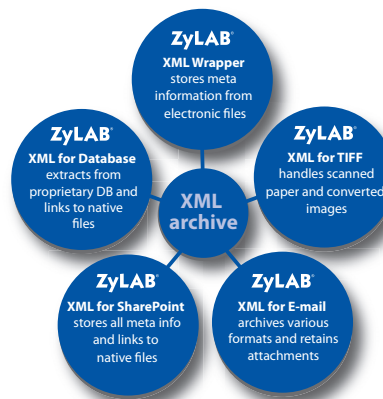

Other products merely import or export the XML format in order to facilitate data transfer among products or the parties to litigation.

Our XML-based platform integrates with 3rd party products and it is included with all of our Enterprise Information Management solutions, including the following systems:

- eDiscovery & Production system
- Compliance & Litigation Readiness system
- Law Enforcement & Investigation system
- Communications Intelligence system
- Digital & Print Media Archiving system

Unite all of your enterprise data

Records, e-mail, and other files that are considered *write once, read many* are the perfect candidates for XML archiving. ZyLAB archives the file content and meta data from 700+ native formats and makes it accessible via a ZyLAB software system (listed at left) that is tailored to your specific information management objectives. The XML archive can reside in any storage environment.

Technical white papers on our five XML approaches are available from zylab.com, or call 1.866.995.2262 for assistance.
